# Preliminary Results

Example: 3C 66A analysis

Source included and detected in a variability analysis of the full Pointing OB archive, on an updated source list

(Verrecchia et al. to be submitted)

A few GRID detections (1-2 HBL, few Galactic) not in 2FGL Cat.

- **GRID Level 3 Archive:** 1-day integration EXP, COUNTS and GAS maps produce from the official LV2STD AGILE archive, covering the whole AGILE data.
- **Using GRID L3 archive,** we can investigate the behaviour of the TeV AGN sources at GeV energies over ~6 years (July 2007 – Aug. 08 not covered by Fermi-LAT), producing lightcurves with different binning (7- and 28-days).

**Comparison with the Pointing OB analysis source sample lightcurves**

# Summary

---

- A systematic search of MeV-GeV counterparts of TeV sources in the AGILE first 2.3 yrs of data has been performed.
- The preliminary results show  $E > 100$  MeV counterparts for ~30% of the 116 TeV sources analysed.
- Detailed analysis is ongoing.
- Upgrade of the analysis using latest calibration matrices (I0023) and updated TeV source catalog is ongoing.
- GRID Level 3 Archive helps to investigate flaring activity over more than 5 years of data in a very short computing time.
